Chapter 8 · Story

“Anyone can join.” The form says otherwise.

An original story at the Common Ground repair café.

The invisible doorway · c08s01

A fictional story. A real question about people.

What would you do?

How should the team investigate unequal access?

A Ask whether organizers consider themselves fair.

B Trace who can enter each stage and where people drop out.

C Add a fairness slogan to the poster.

Suggested answer: B. Tracing each stage can reveal access barriers that intentions and slogans miss.

Belief, feeling, and action are distinct.

- **Stereotype**: a generalized group belief.
- **Prejudice**: a group attitude, often involving dislike.
- **Discrimination**: unequal treatment based on group membership.

Three related, distinct concepts

Stereotype: a group belief

“Every newcomer lacks repair skills.”

Prejudice: an attitude

“I dislike newcomers before meeting them.”

Discrimination: unequal treatment

Reject someone for being a newcomer.

These need not form an inevitable sequence.

Belief, attitude, and action are related but distinct.

Change the encounter and the structure.

- **Intergroup contact**: interaction between members of different groups.
- Support cooperation, shared goals, equal status, and backing from organizers.
- **Procedural change**: remove an unnecessary entry requirement.
- Evaluate whether people can actually participate.

Sharing a room and sharing participation

Limited participation

Newcomers watch. Established members control the tools and decisions.

Cooperative contact

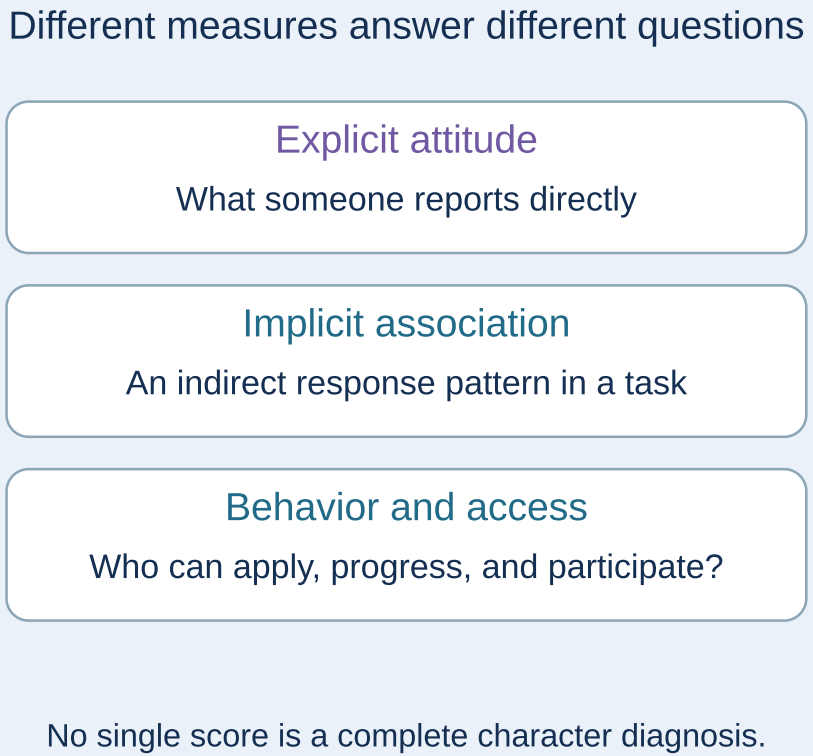

Work on a shared goal. Share relevant tools and decision-making. Organizers support equal participation.

Intergroup contact can help under some conditions. Check actual access and participation.

Cooperation, equal status, shared goals, and support matter.

What can we really conclude?

An explicit attitude is an evaluation someone reports directly. An implicit association is a link between ideas that may be measured indirectly, such as through the speed of responses in a sorting task. Discriminatory behavior concerns how people are actually treated. Those are different things to measure. An implicit-association score is not a complete diagnosis of character or a forecast of every action. A statement of fairness also cannot establish fair treatment. Evaluate changes using meaningful outcomes: who can apply, progress through recruitment, and participate afterward? Include follow-up and the experiences of people affected. Interpret small samples cautiously and protect privacy. Investigating unequal access does not justify collecting unnecessary personal information.

Try the idea somewhere new.

Friend referrals become an open skills-based application. How can improvement be assessed?

A Check whether organizers feel more inclusive.

B Compare the friendliness of form wording.

C Track applications, progression, and participation using relevant criteria.

Suggested answer: C. Applications, progression, and participation can show where barriers remain. Interpret those outcomes with context and privacy safeguards.

Close your notes. Explain it.

> Give an example of discrimination without an openly hostile statement.

> Why might a contact event leave unequal access unchanged?

1. An irrelevant requirement or restricted network can exclude a group without an openly hostile statement.

2. Contact can leave unequal access unchanged when decision power, incentives, status differences, or procedures remain the same.

Maya, Sam and Leo at the repair café.

Carry one idea into your week.

Review a process you are authorized to examine. Identify an unnecessary barrier, propose a change, and select a fair outcome measure without collecting unnecessary personal data.

Revisit tomorrow and in a week.
Explain it without notes, then use a different example.

Take the question into a different setting.
